

## **Prerequisites for verification**

The Company, distributor or manufacturer of the Software subject to verification is requested to send a document describing the following:

### **1. Company Data**

- 1.1. Full name of the Company that requests the verification service.
- 1.2. Full address of the Company.
- 1.3. Full address where the verification will take place.

### **2. General data of the Software**

- 2.1. Commercial name of the Software.
- 2.2. Brand, family, model, etc., (those that apply) of the Software.
- 2.3. Software version number.
- 2.4. The binary checksum MD5 of each of the legally relevant software modules.

### **3. Data related to the communication of the Software**

- 3.1. The measurement systems subject to legal control with which the Software can operate.
- 3.2. The user interfaces of the Software.
- 3.3. The communication interfaces of the Software.

### **4. Specific data of the Software**

The description must include brands, families, models, version numbers, etc., (whichever applies) for each of them:

- 4.1. Operating systems in which the Software can operate.
- 4.2. Minimum hardware required for the Software to operate correctly.
- 4.3. Architecture, scheme, structure or software programming model.
- 4.4. Environments or environments used for the development of the Software.
- 4.5. Integrated Development Environment's that will be used for verification of the source code.
- 4.6. Programming languages used.
- 4.7. Databases used.
- 4.8. Approximate number of lines of the Software source code.
